

Handling short instructions for PLC coupling

Commissioning of S5-LAN++ and S7-LAN

Before you can start with the configuration of the coupling you should first set up your S5-LAN++ (to access your S5 controller via the PG interface) and / or S7-LAN (to access your S7 controller via PPI/MPI/Profibus) modules. For this please read the short instructions for the S5-LAN++ or S7-LAN.

Configure coupling

The S5-LAN++ and S7-LAN are supporting multiple couplings. In general a distinction is made between a active controller, which establishes and manages the connection, and a passive controller, which waits for the connection and queries.

For the coupling type “PUT/GET” a change is only needed on the active controller, because here flags and data blocks from the passive controller are directly accessed by the active controller.

For the coupling type “SEND/RECV” a change on both controllers is needed.

The following table shows a overview about possible couplings between controllers and shows up, where you can find more information about the configuration of the coupling. All descriptions and example applications can be downloaded on the product page of the S5-LAN++ and S7-LAN.

| controller 1 (active) | controller 2 (passive) | coupling type | description / example |
|-----------------------|------------------------|---------------|----------------------------------|
| S7-200 via PPI | <i>any</i> | PUT/GET | project „S7-LAN_PUT-GET“ |
| | S7-200 via PPI | SEND/RECV | project „S7-LAN_SEND-RECV“ |
| S7-300/400 via MPI/DP | <i>any</i> | PUT/GET | project „S7-LAN Aktives PUT-GET“ |
| | S7-300/400 via MPI/DP | SEND/RECV | project „S7-LAN an S7-LAN“ |
| | S5 via PG port | SEND/RECV | project „S5-LAN++ an S7-LAN“ |

| controller 1 (active) | controller 2 (passive) | coupling type | description / example |
|------------------------------|-------------------------------|----------------------|--|
| S7-300/400 via Ethernet-CP | S7-200/300/400 via PPI/MPI/DP | PUT/GET | S7-LAN manual section „Access via PUT/GET“ |
| | S7-300/400 via MPI/DP | SEND/RECV | project „S7-LAN an S7-CP“ |
| | S5 via PG port | PUT/GET | S5-LAN short instruction „S5-S7-coupling“ |
| | S5 via PG port | SEND/RECV | Project „S5-LAN++ an S7-CP“ |
| S7-1200/1500 via Ethernet | S7-200/300/400 via PPI/MPI/DP | PUT/GET | S7-LAN manual section „Access via PUT/GET“ |
| | S5 via PG port | PUT/GET | S5-LAN short instruction „S5-S7-coupling“ |
| S5 via PG port | S5 via PG port | SEND/RECV | project „S5-LAN++ an S5-LAN++“ |

For every example project shown in the table above there is also a description of the project. For S5 couplings this can be found within the ZIP archive with the example projects and for S7 couplings within the manual of the S7-LAN module.

S7-PLC over WLAN/WIFI

Communication with S7-PLC via WLAN/WIFI, just how and with what?

Data-communication with S7-PLC from PC or other devices via WLAN/WIFI, which interface is required. Questions you don't have to worry about. With "S7 over WLAN/WIFI" you get the right interface-products for PPI, MPI and Profibus.

Which one you use then is up to you.

Variable-chart without Step7-programming package

You would like to give your customer the opportunity to read current numbers of the manufacturing Online, without installing a visualisation or even the STEP7-package? Then a S7-LAN with the option Status Variable" is needed, and your customer can take a look at these password protected data on a site of the integrated webservice.
